## Quad Driver

### Description

The HA13007 monolithic, bipolar, high-voltage, high-current quad driver is especially designed for switching applications. This device is recommended for interfacing low-level logic to peripheral loads such as relays, solenoids, stepping motors, LED, heaters, and other similar high-voltage, high-current loads.

### Features

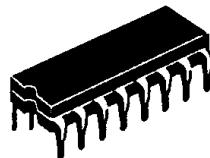

- Guaranteed minimum output breakdown of 60 V, and maximum output current of 0.7 A
- Low output collector-emitter saturation voltage
- Input compatible with TTL, LSTTL and 5 V CMOS.
- Integral transient suppression diodes for inductive loads
- Lower input current

Table 1 Truth Table

ENABLE	IN	OUT
H	H	L
H	L	H
L	X	H

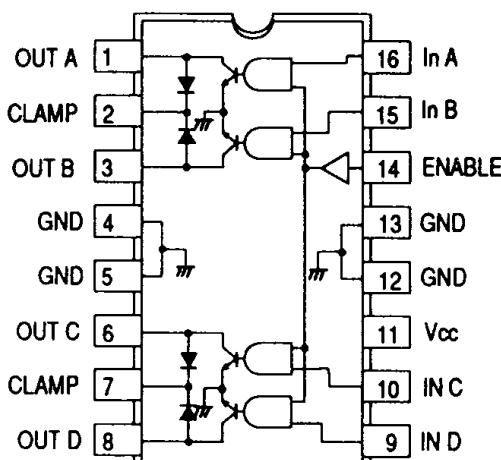

Note: H=High level: 2.0 V  
L=Low level: 0.8 V  
X=Don't care

### Ordering Information

Type No.	Package
HA13007	DC-16C

**Table 2 Absolute Maximum Ratings (Ta=25 °C)**

Item	Symbol	Rating	Unit	Note
Supply voltage	Vcc	7.0	V	1
Input voltage	Vin	0 to Vcc	V	
Output voltage	VceX	60	V	
Output current	Iout	0.7	A	
Power dissipation	Pt	1.85	W	2
Thermal resistance	Junction-case	θjc	15	°C/W
	Junction-ambient	θja	60	°C/W
Junction temperature	Tj	150	°C	
Operating junction temperature range	Tjop	-40 to +125	°C	
Storage temperature range	Tstg	-55 to +125	°C	

The absolute maximum ratings are limiting values, to be applied individually, beyond which the device may be permanently damaged. Functional operation under any of these conditions is not guaranteed. Exposing a circuit to its absolute maximum rating for extended periods of time may affect the device's reliability.

Notes: 1. Recommended operating voltage Vcc = 4.75 to 5.5 V

2. Thermal resistances are as follows:

θj-a1≤60 °C/W(Soldered on a print circuit board)

θj-a2≤35 °C/W(Soldered on a print circuit board with copper sufficiently)

θj-a3≤15 °C/W(Soldered on pins 4, 5, 12, and 13 with an infinite heat sink)

**Table 3 Electrical Characteristics (Ta=25 °C, Vcc=5.5 V)**

Item	Symbol	Min	Typ	Max	Unit	Test Condition
Output leakage current	Icex	—	—	100	μA	Vce=60 V, Vin=0.8 V
Output sustaining voltage	Vce(sus)	60	—	—	V	Vin=0.8 V, Ic=10 mA
Output saturation voltage	Vce(sat)	—	0.3	0.5	V	Vcc=4.75 V, Vin=2.0 V
		—	0.5	0.7		Ic=0.4 A Ic=0.7 A
Input low voltage	Vil	—	—	0.8	V	
Input low current	Iil	—	-1	±10	μA	Vin=0.8 V, Ic=0
Input high voltage	ViH	2.0	—	—	V
