NOTE	 Modification for charger specification may be required for different battery specification. Please contact battery vendor and MEAN WELL for details. All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25°C of ambient temperature. This is Mean Well's suggested range. Please consult your battery manufacturer for their suggestions about maximum charging current limitation. The power supply is considered a component which will be installed into a final equipment. All the EMC tests are been executed by mounting the unit on a 360mm*360mm metal plate with 1mm of thickness. The final equipment must be re-confirmed that it still meets EMC directives. For guidance on how to perform these EMC tests, please refer to "EMI testing of component power supplies." (as available on http://www.meanwell.com)
