

Ultrasonic Atomizer Head with 12 LEDs

Model: HG-999 / 181359**Summary:**

Small rockery landscaping atomizer.
maker for bonsai and mystical looking appearances. 12 Colour changing LED's Red/Blue,
Low water level cutout.

Fog/Mist

Product Features:

1. ultra-fine spray particles, large atomization amount.
2. Stable waveform and high conversion efficiency;
3. The circuit board uses environmentally friendly electronic components, in line with Rosh export standards;
4. The anti-oxidation layer on the surface of the atomized sheet protects the coating process and has a long service life.
5. Built-in protection program, automatically power off when water level is low, top up to work again.
6. Replacable Piezo 20mm disk, use XHX-60018802

Driver board parameters:

Operating voltage 24V
,Current 500mA
Fixed frequency 1700MHz
Capacitor: 1500 pF.
Atomization amount: 300mL/h
Operating life 5000 hours

Atomization sheet parameters:

The ultrasonic piezoelectric atomizing transducers of compact and higher performances.
Specially electrode protection layer of the transducer is far superior to Nickel or Titanium electrode used in traditional transducers, it has more advantages in withstanding acid, alkaline and cavitation corrosion, so it features higher strength, less water scale, and longer lifetime.
