Soldering Station 2006

.....Coming Soon....

Born from the success of the 3005 Workstations, and the need to produce a smaller, more compact, versatile unit for the new lead-free soldering requirements -- the 2006 surpassed all expectations.

The fully computerized 2006 works the way you work -- it's intuitive logic controls temperature more precisely, more efficiently.

It's what it's all about. Performance where and when you need it.

The first in the next generation of soldering solutions from Magnum.
