INTEGRATED CIRCUIT TOSHIBA TECHNICAL DATA

TOSHIBA CMOS DIGITAL INTEGRATED CIRCUIT TC9235P, TC9235F

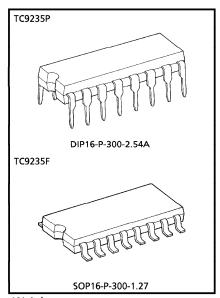

SILICON MONOLITHIC

ELECTRONIC VOLUME

The TC9235P and TC9235F are an optimum CMOS IC which has been designed for electronization of volume control of audio equipment, etc.

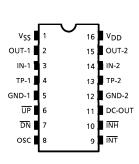

FEATURES

- ◆ Attenuation can be controlled from 0dB to -78dB by up, down input.
- This IC have 20dB tap for loudness circuit.
- This IC features a built-in DC output circuit (7 level) for volume level meter.
- Polysilicon resistors enables low-distortion, highperformance volume systems.
- Volume level remains in backup mode with low current consumption.
- Package is DIP16 and SOP16.

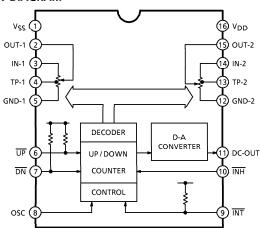

Weight DIP16-P-300-2.54A : 1.0g (Typ.) : 0.16g (Typ.) SOP16-P-300-1.27

- The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by TOSHIBA CORPORATION for any infringements of intellectual property or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any intellectual property or other rights of TOSHIBA CORPORATION or others. TOSHIBA is continually working to improve the quality and the reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to observe standards of safety, and to avoid stuations in which a malfunction or failure of a TOSHIBA product could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent products specifications. Also, please keep in mind the precautions and conditions set forth in the TOSHIBA Semiconductor Reliability Handbook.

OPERATION

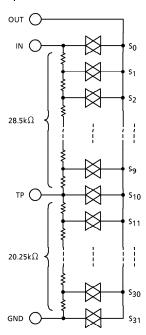

1. Volume circuit

Volume circuit consist of ladder resistor and analog switch.

Tap for loudness is connected to step 10 (20dB).

Attenuation is as follows when resistor (3.9k Ω) is connected between TP pin and GND pin.

• Equivalence circuit

 Volume step and attenuation (Attenuation is as follows when resistor (3.9kΩ) is connected between TP pin and GND pin.)

STEP	ATTENUATION	STEP	ATTENUATION
0	0 (dB)	16	32 (dB)
1	2	17	34
2	4	18	36
3	6	19	38
4	8	20	40
5	10	21	42
6	12	* 22	46
7	14	23	50
8	16	24	54
9	18	25	58
10	20	26	62
11	22	27	66
12	24	28	70
13	26	29	74
14	28	30	78
15	30	31	∞

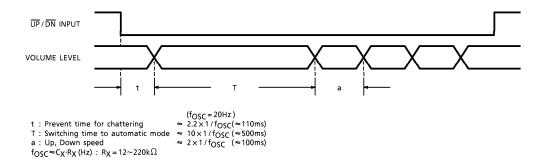

^{*} Step 22 (46dB) initial value.

2. Volume up, down control circuit

Volume up, down control is executed by \overline{UP} , \overline{DN} key input.

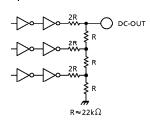

- The 1 step/1 push volume is controlled by "L" level of \overline{UP} , \overline{DN} key.
- If \overline{UP} , \overline{DN} key is input "L" continuously, volume level is changed continuously.
- Timing of key input

3. DC output circuit for volume level

DC output for volume level meter is internally connected to D-A converter (R/2R type). 8 stage output voltage which is corresponded to volume level is generated. Because output impedance \approx 22k Ω (typ.) is high, If input impedance of next setting level meter IC is low, set to Buffer.

• Equivalence circuit

Volume step and Output voltage

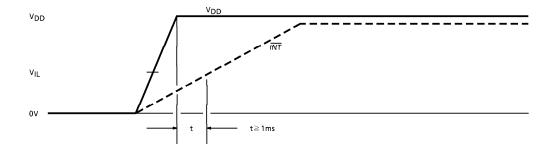

STEP	ATTENUATION (dB)	OUTPUT VOLTAGE (V)
0~ 3	0~ 6	7/8 V _{DD}
4~ 7	8~14	6/8 V _{DD}
8~11	16~22	5/8 V _{DD}
12~15	24~30	4/8 V _{DD}
16~19	32~38	3/8 V _{DD}
20~23	40~50	2/8 V _{DD}
24~27	54~66	1/8 V _{DD}
28~31	70~∞	0

4. Initialization and Backup operation

(1) Initialization operation

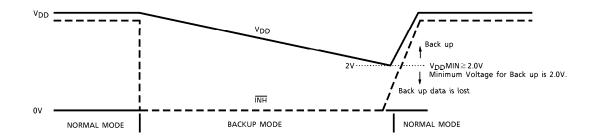

When power on, volume level is set to initial value (46dB) by setting $\overline{\text{INT}}$ pin to "L" level for a while.

Adjust condenser value which is set $\overline{\text{INT}}$ pin to the period while $\overline{\text{INT}}$ pin is "L" level is longer than 1ms when power on.

(2) Backup operation

Internal operation is all stopped when $\overline{\text{INH}}$ pin is "L" level, and prohibit input and output. Volume data is remains while Backup mode with low current consumption.
